

CAROLINE G. OLIVEIRA

Data Engineer (GCP and AWS native)

Data Engineer with 3+ years of experience building data solutions across multi-cloud environments, certified specialist in GCP with strong hands-on expertise in AWS. Skilled in developing robust data pipelines and contributing to data architectures — including Medallion Models and Data Mesh — with expertise demonstrated through a proven professional track record and industry certifications.

📍 Brazil, SP - São Paulo, Vila Romana

Language Proficiency: English C1, Portuguese C2

CURRENT EXPERIENCE

Mid Level Data Engineer - GCP Specialist

FCamara Group · May 2025–Present · Financial sector client

- **Architecture:** Implemented Data Mesh with Medallion Model layers (Bronze/Silver/Gold), ensuring full data traceability and quality across all zones. Upgraded the company's sheet oriented data management model into a solid Data Lake model on top of Data Governance rules and clear data definitions, strengthening Data Driven Culture within the company
- **Pipelines:** Built dozens of high-performance ETL/ELT pipelines using Apache Beam (Dataflow), Python and advanced SQL — covering Full, Incremental, and CDC ingestion from 7+ diverse data sources, transactional tables in Oracle, PostgreSQL, Firestore, SFTP, cloud buckets, sheets and APIs into a BigQuery Data Warehouse, as well as keeping data history.
- **GCP stack:** BigQuery, Cloud Composer (Airflow), Cloud Run, Pub/Sub, Dataform, Dataflow, Dataplex (Knowledge Catalog), Datastream, Cloud Storage, Google Cloud APIs and SDK
- **Observability:** Engineered monitoring solution with Apache Airflow integrated with Google Chat for automated pipeline failure alerts
- **Maintenance:** Fixed DAGs errors in Airflow environment with 160+ of DAGs as soon as notified by triggered warnings; helped customers troubleshoot queries construction logic flaws and dashboards visualization errors; investigated missing data in legacy architecture.
- **AI & Governance:** Developed AI-powered automated data cataloging pipeline integrated into Dataplex for enterprise-grade governance
- **DevOps:** CI/CD with GitHub Actions to support the architected flow of pipeline construction to help engineers avoid the cloud UI and work mainly with an IDE by leveraging the automatic configuration and provisioning of Dataform resources; containerization with Docker, Git and advanced shell scripting
- **Quality:** Refactored legacy pipelines using OOP principles to improve readability and performance; optimized BigQuery SQL queries with CTEs and native functions; built single source of truth tables for critical data domains. Built profiling solutions to track data ingestions anomalies
- **Communication:** Maintained frequent contact with stakeholders to align on data usage, data domain and update frequency
- **Documentation:** All processes documented in Confluence
- **Agile methodology** (Kanban–Jira)

EDUCATION

Associate Degree in Systems Analysis and Development (2022-2024)

by Faculdade de Informática e Administração Paulista (FIAP), in brazilian portuguese

Professional Data Engineer Certificate

by Google Cloud

Emission in Jan 2026 · Expires in Jan 2028

Certified Cloud Practitioner

by Amazon Web Services

Emission in Aug 2023 · Expires in Aug 2026

MAIN SKILLS

Core tech stack:

- Google Cloud Platform: BigQuery, Cloud Composer, Dataflow, Dataform, Datastream, Dataplex, Pub/Sub, Cloud Run, Cloud Storage
- AWS Cloud Platform: S3, Glue, Athena, Lambda, ECS/Fargate, DynamoDB, EC2
- Orchestration: Apache Airflow (VM + Cloud), DAGs, Apache Beam
- Programming Languages: Python (pandas, boto3, aws wrangler), advanced SQL, Shell Script
- IaC & DevOps: GitHub Actions, Docker, CI/CD, Git
- Sources: Oracle, PostgreSQL, Firestore, REST/GraphQL APIs, SFTP, CDC

Outstanding soft skills:

- Ownership, Accountability, Reliability, Autonomy, Initiative, Focus, Self-Management
- Technical Decision Making, Knowledge Sharing
- Technical Documentation, Translating Business Needs into Technical Concepts
- Collaboration and Communication with other teams
- Innovation, Analysis, Creativity

PREVIOUS EXPERIENCE

Mid-Level Data Engineer II

Zup IT Innovation · Nov 2023–Feb 2025 · Multi-cloud environment (specially AWS)

- **Data Lakehouse Architecture Model:** Designed and maintained ELT/ETL pipelines with Apache Airflow (DAGs) using Medallion architecture; ingestion via REST/GraphQL APIs into Data Lake (S3, parquet files) and Data Warehouse (BigQuery)
- **AWS Stack:** S3, Glue, Athena, Lambda, ECS/Fargate, DynamoDB, EC2, EFS, CodePipeline
- **Object Oriented Programming (Python):** Developed scripts and internal OOP libraries using pandas, boto3, and awscli for data ingestion and transformation automation
- **Modeling:** Created datasets using star schema and snowflake schema with ERD design; delivered domain-specific data marts
- **DevOps:** CI/CD via GitHub Actions and AWS CodePipeline; Git version control.
- **Data Products:** Developed and maintained dashboards (Power BI, Looker Studio), managed full data product lifecycle and GCP IAM access control.
- **Governance:** Implemented Data Lineage solutions; created access control policies aligned with governance standards; technical documentation (ServiceNow, Confluence).
- **Observability Solutions:** Data Lineage creation from Data Warehouse as an observability tool dashboard, promoting Data Swamp prevention.
- **Support to data consumer teams and stakeholders:** maintenance of a Power BI Gateway in a virtual machine, Looker Studio dashboards, data needs agendas. Raised requirements for data products.
- **Agile methods:** Kanban, sprints
- **Designed and delivered SQL training** for business "Data Partners" to migrate 5+ different teams away from spreadsheets and toward BigQuery

Data Governance Analyst

Zup Innovation · Mar 2023–Nov 2023

- **Data Access Policy:** Designed and enforced the full access lifecycle for the Data Warehouse — from provisioning to revocation — in collaboration with Privacy, Data Protection, and Compliance teams. Authored Non-Disclosure Agreements and terms of use mapped to professional profiles and team purposes, including specific conditions for accessing PII data.
- **Data Creation Standards:** Defined and documented guidelines for the Data Engineering team on how and where to make data available to consumers — covering nomenclature, prefix conventions, data types, common naming standards, language, and field descriptions.
- **RACI Model:** Built a Responsibility Matrix mapping data assets by source service and access by consuming teams, enabling clear ownership and accountability across the organization.
- **Data Quality Assurance:** Developed Data Profiling resources and formalized data expectation contracts during ingestion processes to proactively catch and prevent quality issues at the pipeline level.
- **Data Warehouse Management:** Administered BigQuery Data Warehouse including periodic access and usage reviews, data lifecycle policy enforcement, and prevention of Data Swamp scenarios.
- **Data Modeling:** Designed analytical layers (data marts) and dataset schemas using star and snowflake schema standards; built Entity Relationship models aligned to business requirements.
- **Documentation:** Authored technical articles for the public ServiceNow Knowledge Base, covering processes, policies, and data standards for internal and cross-team use.
- **Access Control:** Managed and periodically reviewed permissions across GCP services (IAM, Alerts, Logs), ensuring adherence to governance and least-privilege principles.
- **Stakeholder Communication:** Partnered with internal business areas and stakeholders to understand data needs and usage requirements; translated those needs into actionable guidance for the Engineering team.
- Delivered internal training on BigQuery, SQL, Google Sheets, and Looker Studio.

AWARDS

Hackathon - “AI Revolution” (2024) - 1st place

StarkBank - AI driven solution for KYC analysis

School Enterprise Challenge (2023) - 1st place

Idwall - Background Check System

Hackathon - “Hack das Minas” (2022) - 2nd place

FIAP and Kimberly Clark - A community website for young women

School Enterprise Challenge (2022) - 3rd place

BRQ - Embedded system features for cars
