

CAROLINE G. OLIVEIRA

Data Engineer II

Mid-level Data Engineer with 3+ years of experience designing and implementing data solutions across multi-cloud environments, with proficiency in GCP and solid hands-on experience in AWS. Skilled in developing robust data pipelines and contributing to data architectures — including Medallion Models and Data Mesh — with expertise demonstrated through a proven professional track record and industry certifications.

Seeking an opportunity to expand my hands-on experience by applying practical and theoretical knowledge to tackle new challenges and work with different technologies, progressing towards higher levels of responsibility and seniority over time.

Brazil, SP - São Paulo, Vila Romana caroline.development@gmail.com 55 11 944591047  <https://www.linkedin.com/in/carolinego/>

CERTIFICATES

Professional Data Engineer
Google Cloud
Emission in Jan 2026 · Expires in Jan 2028

Certified Cloud Practitioner
Amazon Web Services
Emission in Aug 2023 · Expires in Aug 2026

LANGUAGES

English - Advanced
Brazilian Portuguese - Native

AWARDS

Hackathon - “AI Revolution” (2024)
1st place
StarkBank - AI driven solution for KYC analysis

School Enterprise Challenge (2023)
1st place
Idwall - Background Check System

Hackathon - “Hack das Minas” (2022)
2nd place
FIAP and Kimberly Clark - A community website for young women

School Enterprise Challenge (2022)
3rd place
BRQ - Embedded system features for cars

More details on my LinkedIn page.

EDUCATION

2022-2024 Systems Analysis and Development
Faculdade de Informática e Administração Paulista (FIAP)
Associate Degree

EXPERIENCES

May 2025 – Now

Data Engineer II
FCamara (remote) - Mid Level

Project: Data Engineering consultancy via Fcamara, allocated to a financial sector client.

- Key Achievements & Responsibilities:
- Implemented Data Mesh architecture with Medallion Model layers and high-performance ETL processes, migrating CSV oriented data management into a solid Data Lake model on top of Data Governance rules and clear data definitions, strengthening Data Driven Culture within the company.
 - Leveraged GCP services: BigQuery, Composer, Cloud Storage, Cloud Run, Pub/Sub, Dataform, Dataflow, Dataplex, Datastream.
 - Developed pipelines with Python, SQL, Apache Beam and IaC tools (GitHub, Docker).
 - Connected diverse data sources: Oracle, PostgreSQL, Firestore, SFTP servers, CSV files, and APIs.
 - Created CI/CD automations using GitHub Actions.
 - Designed and supported ingestion models from transactional databases to Bigquery: Full, Incremental, and CDC.
 - Built observability solutions with Apache Airflow (VM and cloud) integrated with Google Chat for automatic alerts.
 - Enhanced performance/readability of Airflow pipelines (OOP, optimized libraries) and SQL queries (CTEs, platform-specific functions, clean structure).
 - Developed AI-powered automated data cataloging integrated into Dataplex for governance.
 - Maintained frequent contact with stakeholders to align on data usage, update frequency, and Lake health.
 - Documented processes in Confluence; applied Agile (Kanban-Jira) methodology.
 - Troubleshoot legacy architecture failures; created single source of truth tables for critical data.
 - Extensive use of Git commands, shell scripting, and bash files

Nov 2023 – April 2025
1 year 5 months

Data Engineer II

Zup IT Innovation (remote) - Mid Level

- **Creation and support of ELT and ETL processes:** mainly with Airflow configured in AWS ECS and supported by other services. Key tools and services: GitHub, S3, Glue, Athena, DynamoDB, GCP Bigquery. Main sources of data consist of APIs from services used by the company, such as Salesforce or Uber. Multicloud environment consisting of GCP, Azure, and specially AWS.
- **Data Lakehouse Architecture model:** Bronze layer as parquet files in S3, Silver and Gold layers in AWS Athena and GCP Bigquery for a Data Warehouse.
- **Support data consumer teams and stakeholders:** maintenance of a Power BI Gateway in a virtual machine, Looker Studio dashboards, data needs agendas.
- **Infrastructure as Code:** Github repository set along with Codepipeline, EFS and a Lambda function to update Airflow DAG files for the Airflow Scheduler service configured on ECR to feed every Airflow task running as ECS tasks, sharing a common EFS for the scripts read by DAG files.
- **Object Oriented Programming:** Specially for the use of DAG scripts; heavy pandas and numpy use.
- **CI/CD automation:** GitHub Actions
- **Data modeling:** dataset and schemas creation as star/snowflake schemas, Data Entity Relationship models
- **Data Products Management:** life cycle review, job scripts for moving data and checking on usage (data marts, spreadsheets, datasets and tables, storage buckets)
- **Observability Solutions:** Data Lineage creation from Data Warehouse as an observability tool dashboard, promoting Data Swamp prevention.
- **Agile methods:** Kanban, sprints
- **Communication:**
 - To internal client support via ticketing systems or external projects, handling issue interpretation and resolution
 - To service providers for enhancement requests and technical inquiries
 - Raise requirements for data products
 - Deny or allow access to data according to Governance policies and Data Owners permissions
 - Training on basic SQL knowledge for inner business teams

Mar 2023 - Nov 2023
6 months

Data Governance Analyst II

Zup IT Innovation (remote) - Mid Level

- **Creation of policies for :**
 - **Data Access:** Access lifecycle from provisioning to controlling for a Data Warehouse; Create and document terms and Non-Disclosure Agreements along with the Privacy & Data Protection and Compliance teams, according to use cases and professional profiles matching a team's purpose or goals. Set conditions for accessing PII data.
 - **Data Creation:** guidelines for the Data Engineering on how and where to make data available for customers, such as nomenclature, prefix definition, data types, common names, language, descriptions.
- **Responsibility Matrix (RACI model)** for services and teams: mapping of data available by service and access by what teams, in common according to included teams.
- **Data Quality Assurance:** Creation of Data Profiling resources; Further elaboration on data expectation during ingestions to avoid errors
- **Data Warehouse Management (GCP BigQuery):** Access and usage reviews and data lifecycle policies assurance.
- **Data Modeling:** dataset and schemas creation as star/snowflake schemas, Data Entity Relationship models to best fit business requirements.
- **Documenting:** creation of articles for public ServiceNow Knowledge Base
- **Access control and review:** for GCP services (IAM, alerts, logs)
- **Communication:** Collaboration with internal business teams and stakeholders to understand data needs and usage, providing guidance to the Engineering team
- **Training:** On data access and governance (SQL, Google Sheets, Looker Studio, "LGPD")
